

Let's put America back to work.

15-minute COVID-19 tests available now.

4 independent studies.
1,794 participants.
Real-world sensitivity and specificity.

Introducing *Covid-Rapid* serology test by Abacus Pharma International (API): A portable, convenient, and affordable COVID-19 test kit available now for medical providers. Backed by real-world data. Registered with the FDA.

Rapid serology testing is critical to any strategy for containing COVID-19. It helps determine where the virus is spreading, who has immunity and how widely the virus has spread. *Covid-Rapid* looks for antibodies against current and past infections to detect who may be clear or who may have immunity to go back to work alongside other Americans.

- API has more than 15 years of experience in rapid diagnostic tests and has developed more than 200 types of rapid tests; this is our **CORE COMPETENCY**
- Extensive experience has allowed us to develop a highly specific test for COVID-19 that won't interact with other viruses or infections that may be present in one's blood
- Industry-leading sensitivities and specificities, based on a sample size that is up to **TEN TIMES LARGER** than many other antibody tests on the market
- **DATA MATTERS** and we believe full transparency is the key to making informed decisions
- API's *Covid-Rapid* test is the **ONLY** test in the recent independent study done by Harvard and UCSF that produced **ZERO FALSE POSITIVES** when testing for past infections
- Tens of thousands of our *Covid-Rapid* tests have already been performed in Europe in real world conditions

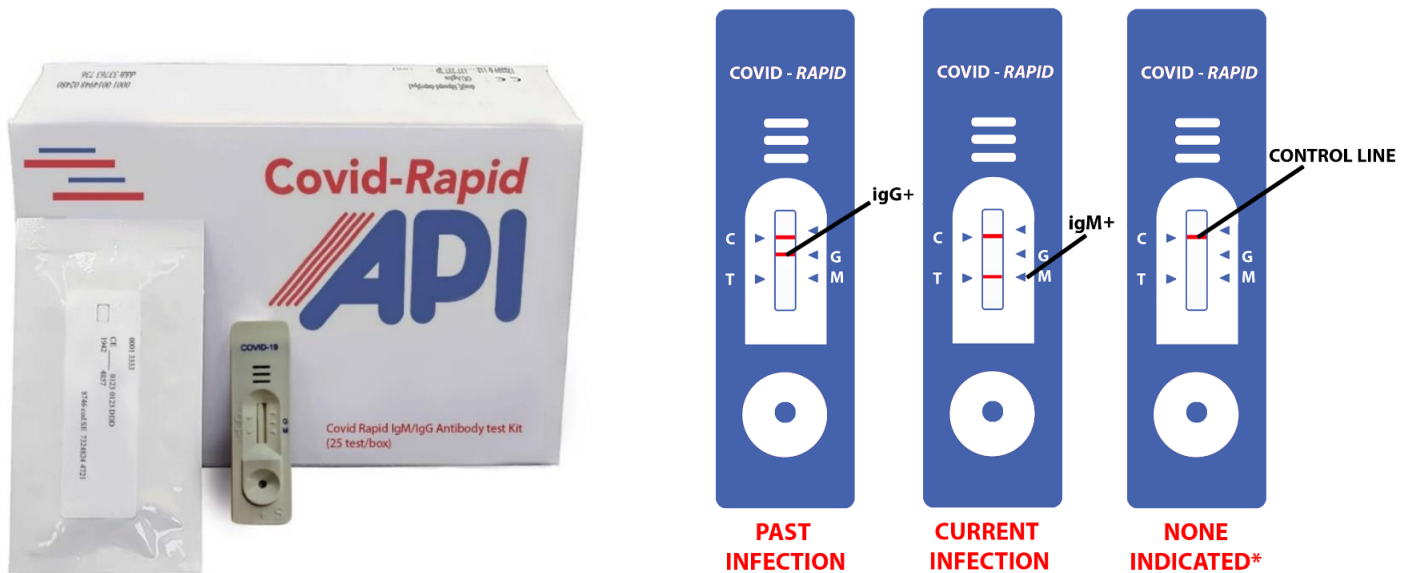

Test Features & Benefits:

- On-site test, 10-15 minutes visual result
- Easy and Fast – No additional training required to perform the test
- Very cost-effective option for large population screening and re-screening
- The IgG/IgM rapid test can be deployed easily and doesn't require any expensive equipment purchases, refrigeration or other consumables
- Highly Accurate and can be performed on individuals' multiple times per week
- Those with a negative test can resume work faster
- Those with a positive test, but no symptoms, can self-quarantine and minimize exposure to others

Positive results of IgG/IgM antibodies indicate current and/or past exposure to COVID19.

Negative results indicate that the patient currently has not produced antibodies against COVID19.

Covid-Rapid can be used in emergency room, physician's offices, nurses' stations, medical clinics, pharmacies, drive through test stations, and ultimately, with upcoming FDA approval, even in-home setting to identify if symptomatic patients may be infected with COVID-19.
